

Automatic Web Forms II

for ACT! 2011 and up

User's manual – part 7

How to send data from an *Automatic Web Forms* form to an outside page

How data is sent.....	2
How to configure the communication with the outside page.....	2
Automatically redirecting your form to the outside page.....	5
Contacting support	5

NOTE: The features described in this manual are available through a paid subscription only

In some instances, you will want to send data directly from the form to an outside page, like a shopping cart.

Automatic Web Forms offers this possibility without interfering with the regular functioning of Automatic Web Forms: in other words, data is still recorded on Automatic Web Forms server for easy importing into ACT! and at the same time it can send data to another page to integrate with another process.

How data is sent

Data is sent as POST. This is the technical term that web programmers will recognize.

How to configure the communication with the outside page

Open the add-on and go to *Forms>Edit Form...>Basic Details*. In the last screen of the wizard, enter the address of this outside page in the *Next Page Link* text box. Don't forget to enter some text for the *Next Page Text* as well.

Form Basic Details

Form Text
The title, button text, thank you message and Next Page link are fully customizable (you may use HTML tags).

Form Title:
Completed Work

Form Introductory Text (HTML):
HTML...

Submit Button Text:
Send Request

Thank You Message (HTML):
Thank you! Your request has been recorded successfully.
HTML...

Next Page Text:
Continue to our shopping cart ?

Next Page Link (in most cases, it should start with http://):
http://www.shoppingcart.com/cart.cgi
Advanced...

< Previous Next > Cancel Save

Do Not Close

Then click on the *Advanced...* button and select *I need to send data from Automatic Web Forms via POST*.

Next Page Options

Data Requirements:

I DON'T need to send data from Automatic Web Forms

I need to send data from Automatic Web Forms via POST

POST variables:

Values (Data to send)	POST Variable Name	
First Name		Add...
Last Name		
E-mail		

Other Options:

Automatically Redirect Users to the Next Page after: Seconds

OK

Cancel

In the grid, you see the fields in your form. You may associate a variable name to each field. The variable names should be given to you by the technical support of the outside page.

For instance, you might get this information from technical support: *“you may pass the first name (variable first_name), last name (variable last_name), the E-mail (variable email) and your account ID (variables account_id) to your shopping cart.”*

In this case, you would set it up like this:

Next Page Options

Data Requirements:

I DON'T need to send data from Automatic Web Forms

I need to send data from Automatic Web Forms via POST

POST variables:

Values (Data to send)	POST Variable Name	
First Name	first_name	
Last Name	last_name	
E-mail	email	

Add...

Other Options:

Automatically Redirect Users to the Next Page after: 0 Seconds

OK

Cancel

This means that whatever the user of your form enters as first name will be sent to the shopping cart under the variable name "first_name", etc.

To include data NOT coming from the form, like the above mentioned account ID, click the *Add...* button and type the name of the variable and the value to be sent.

Additional Variable

POST Variable Name:

account_id

Value To Send:

879402

OK

Cancel

If you ever need to edit this value, click on it and the *Additional Variable* window will pop up again.

Last Name	last_name	
E-mail	email	
879402	account_id	

Add...

Other Options:

Automatically Redirect Users to the Next Page after: Seconds

OK

Cancel

Automatically redirecting your form to the outside page

If you want the redirection to the outside page to be automatic, check the box under *Other Options*. You can set up the redirection to happen after a few seconds. This can be useful if you want your user to see the confirmation message before he will be redirected. If you want him to be redirected immediately, leave the *Seconds* value at 0.

Contacting support

Support is provided by e-mail at support@exponencial.com.
